Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Restelli et al (6,419,658). Restelli discloses the invention substantially as claimed including a syringe retraction arrangement adapted to automatically retract a syringe into a container upon full depression of a plunger of the syringe into the syringe thereby avoiding the potential for needle stick injuries, wherein the syringe is resiliently biased to retract into the container and has a retaining arrangement to prevent it from retracting and has release means for the retaining arrangement which are engaged upon complete depression of the plunger to operate the release means. Restelli discloses a syringe including a sleeve assembly and syringe, having a barrel and plunger, a pair of ears, a needle, a guide arrangement of plastic molding or a two piece component, a spring, a detent and recess, of two separate components, further including a cap. The Restelli device works in the same manner as the instant application. [see column 2 ine 66 – colum 4 lines 40 and figure 1.]
